DMYTRO SEKATSKYI

QA Engineer | Embedded QA

+37066988041 | dmytro.sekatskyi@gmail.com | Vilnius, Lithuania
github.com/manchkinq/Portfolio-Embedded-QA

PROFILE

QA Engineer at Wargaming with experience in regression, release stabilization, defect analysis and test documentation. Building on this experience through practical Embedded QA coursework with ESP32 and Arduino simulations, UART/CLI and I2C testing, fault injection, and Python/pytest automation. Seeking an Embedded QA role in Germany; open to relocation.

EMBEDDED QA COURSE AND PROJECTS

Embedded QA in IoT and DefTech | Practical coursework

Seven lab projects using Wokwi, VS Code, PlatformIO and PulseView.

- Tested state transitions, relay safety, GPIO interrupts and button debounce; analyzed UART/CLI boundaries, invalid inputs and crash behavior.
- Decoded I2C captures in PulseView and correlated ACK/NACK traffic with UART logs to investigate peripheral failures and recovery.
- Tested deep sleep, watchdog recovery, sensor failures and persistent-state integrity during interrupted saves.
- Extended Python/pytest serial tests with parametrized boundary and negative cases, JSON assertions, finite timeouts, and setup/cleanup fixtures.
- Analyzed reconnect/backoff, offline buffering, duplicate publishing and heap trends in a simulated MQTT/network node.
- Documented 32 reported defects across the labs and created a Master Test Plan linking risks, coverage, evidence and release criteria.

WORK EXPERIENCE

Wargaming — QA Engineer, World of Tanks

Stabilization and Release team | January 2024 - Present

- Owned regression testing; helped coordinate automation of approximately 10% of the suite, reducing execution time by approximately 10%.
- Created a unified regression test-case template and ranked among the Top 10 QAs by bugs found during preparation of World of Tanks 2.0.
- Owned localization testing, conducted Common Test activities and analyzed external testing results to support release stabilization.
- Served as responsible QA during releases, including final patch distribution and server smoke checks.

EPAM Systems — Java Developer Intern

June 2023 - August 2023

- Completed practical tasks in core Java, object-oriented programming, databases and SQL; contributed to development and testing of a shared intern project.

TECHNICAL SKILLS

Embedded testing: UART/Serial CLI, I2C, GPIO, debounce, state transitions, fault injection, watchdog, sleep/wake, persistence, network resilience simulation.
Automation and tools: Python, pytest, pyserial, JSON, PulseView, Wokwi, PlatformIO, Git, Jira, TestRail, TeamCity, Postman.
Additional: Java, SQL/MySQL, functional and regression testing, bug reporting, test design.

EDUCATION AND LANGUAGES

Vilnius Tech — Bachelor of Information Technologies
Languages: English B2 · German A2 · Ukrainian Native · Russian Fluent
